

Little things make a big difference.

Green is not a new concept at CSC Worldwide. We have been implementing green concepts throughout our facility for many generations now. From the materials we use to the products we create, we strive to be a leader in the quest for a beautiful tomorrow.

: We recycle all CRS, stainless, aluminum, copper, cardboard and wooden pallets.

: We have dramatically increased the use of powder

coat; reducing the amount of “wet” paint. This process reduces the amount of harmful particles that are released into the environment.

: We use ECM (electronically commutated motor) fan motors.

: We have paper recycling stations throughout our

facility to recycle a majority of our paper waste.

: We recycle all printer and copier ink cartridges and donate them to local schools for their fund raising.

: We use environmentally friendly foam in tub bases on our Classique III floor cases.

: We installed skylights in our manufacturing facility to utilize natural light as much as possible.

: We use electronic ballasts to run our lights.

Through recycling, repurposing and donating, CSC Worldwide strives to reduce their carbon footprint.
